DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, 15, 15-16, drawn to reducing channel interference by discontinuing modulation of the carrier controlled by a random bits are supplied by the controller, classified in class 455, subclass 63.1.
 - II. Claims 9-14, 17-20, drawn to optimally organizing the time slots, classified in class 370, subclass 321.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as minimizing for interference while invention II has separate utility such as transmitting in TDMA. See MPEP § 806.05(d).
3. A telephone call was made on 6/23/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
